

Himanshu Kesarvani

Senior Data Scientist — GenAI & AI Agent Specialist — 12 Years Experience

📍Bangalore, India | 📞+91-7702489286 | ✉himanshukesarvani@gmail.com

Professional Summary

Results-oriented **Senior Data Scientist** with over **12 years** of hybrid experience in Software Engineering and Advanced Analytics. Expert in designing and deploying scalable **Generative AI architectures**, including **Model Context Protocol (MCP)** agents and RAG systems on **Azure**. Proven track record of bridging the gap between technical complexity and business strategy—translating raw data into revenue growth through **Predictive Modeling (XGBoost)** and **NLP**. Adept at full-stack data science: from dockerizing applications to fine-tuning LLMs and presenting insights to executive stakeholders.

Technical Skills

Generative AI & NLP: : Large Language Models (GPT-4, Open Source), RAG, Model Context Protocol (MCP), Co-Pilot Integration, Prompt Engineering, RoBERTa, BERT, Topic Modeling (LDA), Sentiment Analysis.

Machine Learning: : XGBoost, Fine-tuning, Random Forest, K-Means Clustering, Logistic Regression, Ensemble Learning, Predictive Modeling, Lead Scoring.

Cloud & DevOps: : Microsoft Azure (Web Apps, OpenAI Service), Docker, Containerization, Google Cloud Platform (GCP), CI/CD concepts.

Languages & DBs: : Python, SQL, R, Spark, PyTorch, C# (Basic).

Visualization & BI: : Power BI, Tableau, Qlik Sense, Grafana, Power Apps.

Professional Experience

M-Files

Senior Data Scientist

Bangalore, India

June 2025 – Present

Domain: Intelligent Information Management (IIM) & AI Automation

- **Enterprise GenAI Agent Development (MCP on Azure):** Architected a cutting-edge **Model Context Protocol (MCP)** server deployed on **Azure Web Apps** using **Docker**. Integrated this server with **Microsoft Co-Pilot** via Power Apps to create a secure, conversational interface for internal data. This enabled non-technical staff to query the SQL Server database using plain English (powered by GPT-4), democratizing access to complex data without writing SQL queries.
- **Revenue Optimization Engine (Lead Scoring):** Developed a **Multiclass Classification System** to evaluate incoming sales opportunities. Fine-tuned an **XGBoost** model to classify leads into four tiers (A-D). This automated the prioritization of high-value "Class A" customers for resource investment while filtering out low-potential "Class D" leads, optimizing sales force efficiency.
- **Customer Segmentation & Strategy:** Applied **K-Means Clustering** to segment the customer base into distinct behavioral groups. Communicated critical feature importance and strategic insights to the sales leadership team through comprehensive documentation and presentations, directly influencing sales targeting strategies.

HSBC

Lead Data Scientist (BI)

Hyderabad, India

Jan 2023 – May 2025

Domain: Banking Operations & Financial Crime Compliance

- **Payment Review Automation (NLP):** Led the development of a **RoBERTa-based multiclass classifier**, trained on a dataset of 30,000+ labeled records. The model categorized complex payment review cases, reducing manual decision-making time from **6 minutes to 40 seconds** per case. This significantly reduced queue backlogs and increased team capacity without adding headcount.
- **Automated Insight Extraction:** Built a Python-based automation tool to scrape and consolidate critical insights from multiple disjointed banking applications. This eliminated manual "swivel-chair" processes for analysts, streamlining data gathering.
- **Workforce Analytics Pipeline:** Designed a robust ETL pipeline to ingest raw data (TXT, Excel, CSV) into SQL Server. Developed a custom **Qlik Sense Dashboard** to visualize KPIs, Headcount, and Project Costs, providing leadership with real-time operational visibility.

Oracle India Pvt. Ltd.

Data Scientist

Hyderabad, India

Apr 2019 – Dec 2022

Domain: Cloud Analytics & Customer Experience (CX)

- **Intelligent Q&A System (Doc-Bot):** Developed an NLP-driven chatbot capable of answering technical queries based on product documentation. Implemented a **feedback loop** where unanswered queries triggered alerts to customer support, ensuring continuous model improvement and customer satisfaction.
- **Enterprise Social Analytics:** Engineered a **Topic Modeling (LDA)** solution to extract latent themes from high-volume enterprise social messages. Built a real-time sentiment analysis pipeline to flag negative trends for immediate intervention by service representatives.

Development Bank of Singapore (DBS)

Analyst

Hyderabad, India

May 2017 – Mar 2019

- **Fair Hiring Algorithms:** Developed a Machine Learning model to predict candidate "Fitment Percentage" for job applications. The model successfully identified key factors influencing hiring decisions, helping leadership mitigate unconscious bias and promote equitable recruitment practices.

Ekincare*Software Engineer*

Hyderabad, India

Sep 2015 – May 2017

- **Medical Data Digitization:** Built a pipeline using **Python, OCR, and NLTK** to digitize and extract structured entities from unstructured medical reports (PDF/Images), powering the platform's digital health records feature.
- **Recommendation Engine:** Developed a lifestyle recommendation system based on user medical history and extracted health markers.

MAQ Software*Software Engineer*

Hyderabad, India

Jan 2014 – Sep 2015

- **Customer Segmentation:** Created segmentation models based on purchasing behavior for large-scale enterprise retail applications, aiding in targeted marketing campaigns.

Education

Indian School of Business (ISB)*Advanced Management Programme in Business Analytics (AMPBA)*

Hyderabad, India

*2019 – 2020***Kamla Nehru Institute of Technology (KNIT)***Bachelor of Technology in Computer Science and Engineering*

Sultanpur, India

2009 – 2013
